

# Direct-store delivery? We thought of everything.

From trailer lift gates to narrow convenience store aisles and the uneven parking lots in between, the Yale® MPB045VH with the retail delivery package is purpose-built to equip operators for success in direct-store-delivery operations.

1

## Stability on challenging terrain.

From door jambs to curbs and uneven, broken parking lots, the 2-inch ratcheting and locking load retention strap helps keep a variety of load types and sizes secure and stable.

2

## Keep charging, keep moving.

Lithium-ion battery power is the perfect match for direct-store delivery, able to charge anywhere, anytime through a standard 120V outlet – even on the back of a trailer between deliveries.

3

## Take multiple pallet types in stride.

Handle the variety of pallet types common in retail delivery operations through a moveable load backrest with quick latch and pivot arms that enable operators to handle multiple pallet types with a single fork configuration.

# Tight spaces? We have you covered.

## Controls built for tight spaces.

Even in its full upright position, the DSD handle gives drivers full functionality and positions them comfortably beside the truck on the lift gate, where space is at a premium.

## Maneuver easily with a lower profile battery.

With a lithium-ion battery pack that's 25% shorter than lead-acid battery packs, the smaller truck footprint offers a major advantage moving through cramped aisles and trailers at creep speed for maximum precision and control in tight, close areas.

- Smaller footprint leaves plenty of room for drivers to stand on the lift gate
- 25% smaller battery box
- 4.2 inches shorter length overall
