

DC/EC Series

Diesel Powered Forklift Trucks

8,000kg, 9,000kg, 10,000kg, 12,000kg, 13,000kg, 14,000kg and 16,000kg

- Choice of Powertrain and Hydraulic configurations, to suit specific customer requirements.
- Load Sensing Hydraulics, with highly efficient 'variable displacement' pumps
- Nominal lifting capacities including side shift carriage - Full capacity up to 6200mm lift height
- New transmissions, with smooth auto-shift system, also featuring protective lock-out on forward-reverse shifting and engine and transmission protection systems as standard
- Fastest lifting speeds, with a practical average of up to 0.35 m/sec
- Excellent ergonomics with renowned Yale ERGO Cab

Yale 
People. Products. Productivity.™

Truck Dimensions

Rated capacities

Load Centre

Distance from forks to centre of gravity of load.

Rated Load

Based on vertical masts as shown in VDI table.

\odot = Centre of gravity of unladen truck
 $Ast = Wa + x + l_6 + a$ (if $b_{12/2} < b_{13}$)
 a = Minimum operating distance
 l_6 = load lengths
 b_{12} = load width
 (VDI-standard = 200 mm BITA recommendation = 300 mm)

DC/EC Series

Models: GDP80DC, 90DC, 100DC, 100DCS, 120DC, GDP130EC, 140EC, 160EC

The DC/EC series offers superior traction, gradeability and drawbar pull. These trucks offer the productive travel / lift speeds and excellent manoeuvrability to meet the demands of tough applications (lumber, pipe, pre-stressed concrete, block/brick, stevedoring and heavy cargo). Special attachments may be required for the applications mentioned above.

ERGO Operator Compartment

Yale's ERGO Operator Compartment is ergonomically designed for maximum operator productivity.

Standard features:

- Full-length handrails
- Three non-slip entry steps
- Open floor with low front dash
- Dash instrument panel positioned to the right of driver, with gauges, warning lights and LCD message centre, switches, key start and park brake
- Two way adjustable steering column for height and tilt angle
- Inch brake/brake/accelerator pedal arrangement
- Custom moulded floor mat
- Angled overhead guard bars
- 3-way adjustable right hand armrest
- Wide angle side view mirrors
- Blinking red warning lights on steering column advise driver to refer to instrument panel
- Paddle lever actuators for hydraulic functions and combination paddle/rocker switches for optional attachments
- Joystick or lever controls.
- A full suspension vinyl seat

Optional enclosed cab option features:

- Curved tempered front and rear glass
- Twin arm single 990mm blade front wiper, rear wiper and top wiper with washer fluid spray
- Ten high capacity outlet vents for heating
- Optional air conditioning, or high capacity air-conditioning, with or without climate control
- Under cab sound insulation
- Cab filter for all incoming air
- Front and rear screen demisting

- Top cover laminated glass
- Storage bins

Other Features:

- A revised dash display which shows ZF WG161 transmission and hydraulic controller error codes.
- The entire operator cabin tilts manually or electrically for complete service access to major powertrain components.

Stage IIIA engines:

This diesel engine conforms to Stage IIIA emission standards and will be supplied into markets where the NRMM (Non Road Mobile Machinery) Stage IIIB legislation does not apply.

Cummins QSB 6.7L

The 6-cylinder in-line engine delivers maximum 116kW (155Hp) output at 2300rpm, offering extra durability for long periods of peak power operation.

Smooth torque of 597Nm at 1500rpm provides excellent acceleration and pulling power.

Stage IIIB engine:

For use mainly within EU (European Union) countries, trucks with Stage IIIB diesel engines have significantly reduced exhaust gas emissions. Also by applying Yale Intelligent Design criteria, these trucks are not only cleaner running but also more economical, achieving up to a 20% fuel saving.

Engines

Stage IIIA

- Cummins QSB6.7 Diesel engine
- ZF WG161 transmission
- Oil immersed 'wet disc' brakes
- Single/Dual VDP hydraulic pump *

Stage IIIB 8-12

- Cummins QSB4.5 Diesel engine
- ZF WG161 transmission
- Dry drum brakes with air dryer
- Single/Dual VDP hydraulic pumps *

Stage IIIB 13-16

- Cummins QSB6.7 Diesel engine
- ZF WG161 transmission
- Oil immersed 'wet disc' brakes
- Single/Dual VDP hydraulic pumps *

Cummins QSB 4.5L

The 4-cylinder in-line engine delivers max 122kW (160Hp) output at only 1900rpm, offering extra durability for long periods of peak power operation.

Smooth torque of 624Nm at 2200rpm provides excellent acceleration and

lugging power.

Cummins QSB 6.7L

The 6-cylinder in-line engine delivers max 125kW (170Hp) output at only 1900rpm, offering extra durability for long periods of peak power operation.

Smooth torque of 732Nm at 1500rpm provides excellent acceleration and lugging power.

Powertrain and Hydraulic Configurations

The range of Powertrain and Hydraulics configurations is designed to suit the requirements of specific customer and application needs, enabling operators to focus on lowering ownership costs and increasing productivity.

** 8-12t models have a single hydraulic pump as standard, the dual pumps are an option. 13-16t models have the dual hydraulic pumps as standard.*

Transmissions

All models feature the new ZF 3WG161 transmission, which is designed for more intensive applications, and delivers increased cooling performance, thanks to a heavy duty transmission oil pump (100L/min at 2000rpm), which ensures sufficient cooling oil flow for the clutches and torque converter.

The transmission features a stiffer torque converter and optimised shift points, which contribute to increased efficiency and results in a 5% lower fuel consumption. Lower noise emissions from the ZF transmission are achieved through the use of helical high contact gears.

A transmission is fitted with an automatic gear-change system with a column-mounted lever or optional FDC pedal for direction changes. Extremely smooth shifting and a forward-reverse shifting lock-out function are standard features.

Power on Demand

The load-sensing hydraulic system provides hydraulic lifting power proportional to the load being lifted. The load-sensing variable-displacement (VDP) pumps ensure that the engine supplies power to the hydraulic pumps only when required. This means that more engine power is available for driving, delivering increased responsiveness and acceleration for increased productivity.

This also delivers 5% increase in fuel efficiency, so reducing overall operating costs and including the

DC/EC Series

Models: GDP80DC, 90DC, 100DC, 100DCS, 120DC, GDP130EC, 140EC, 160EC

efficiency saving by the ZF transmission. In total this represents a fuel saving of 10%.

Three pre-defined user modes (smooth, medium, direct) can be selected through the user interface. These modes allow fine-tuning of the hydraulic controls, to achieve the best balance for the operator and the application.

Hydraulics

The load-sensing hydraulic system delivers faster laden lift speeds and increased auxiliary hydraulic speeds for optimum productivity, especially when using attachments.

Leak-free ORFS (O-ring) type fittings are used throughout the truck and the hydraulic oil tank is equipped with an external sight glass for oil level.

Hydraulic oil is effectively filtered at three locations in the system. The filter system uses a full-flow return line filter with 10 micron cartridge on the main system and is designed to maintain a high cleanliness level, ensuring reliable and durable performance.

- 8-12t models also have the single 90cc VDP pump, with a lifting performance well suited to the practical needs in most applications. Optionally available are Dual 60cc VDP pumps (2x60cc per revolution, max. pump performance 262 l/min) providing up to 30% higher laden lifting speeds.
- 13-16t models feature dual 60cc VDP pumps (2x60cc per revolution, max. pump performance 262 l/min).

Protection Systems

The engine, transmission and hydraulic protection systems monitor operating temperatures and pressures, and are designed to ensure the highest level of truck reliability and prevent unplanned downtime, for maximum productivity. The systems initially derate the engine power and finally (on engine and transmission protection) shut the engine down.

- The engine protection system monitors coolant temperature, air intake temperature and oil pressure.
- The transmission protection system monitors pressure, temperature and forward / reverse lockout on direction changes.
- The hydraulic protection system monitors low oil temperature. High

oil temperature protection is an optional extra.

Cooling System

The Quad-Cooler radiator contains four separate cooling cores for the engine, transmission, hydraulics and charge air cooler. The truck is designed to operate in ambient temperatures of -18° C up to 50° C in normal applications, or up to 45° C for heavy duty operations. The cooling air-intake is located at the top of the counterweight, to provide a cleaner air-flow.

Drive Axle

The wide AxleTech PRC-425 (8-12t) or PRC- 775 (13-16t) drive axle delivers excellent sideways stability and long-term durability thanks to the fitment of strong end-reduction shafts and gears.

All models feature oil-immersed brakes on the drive axle, which are oil cooled for durability and are virtually maintenance free. The parking brake is a dry disc brake on the drive axle input shaft, which is spring applied and hydraulically released

Steer Axle

The hydrostatic steer axle features a double-acting, single steering cylinder with adjustable end stops. It is renowned for its long lifespan and low maintenance requirements. Load-sensing power steering ensures low-effort operation under all operating conditions

Chassis

A rugged unitised frame structure is designed for tough, demanding applications and offers excellent stability. All nominal capacities are rated to include the sideshift carriage and the mast is mounted to the frame, not the drive axle. The DC/EC series has been designed to handle loads to high lift heights and there is no reduced capacity up to and including 6200 mm.

Masts

Yale Hi-Vis™ Simplex and Triplex masts afford operators outstanding visibility. Nested channel design incorporates full-face load rollers and side bearing blocks for durability and lateral rigidity. Rolled mast channels with a generous overlap and formed cross-members provide high strength. The leaf-type chain provides superior strength.

Carriage

The standard carriage is a pin type, 2350mm or 2500mm wide and is

equipped with four angled load rollers. It is an integral piece of the rugged front-end construction and offers excellent visibility. A wide range of carriages is available to suit all applications including non-sideshift, sideshift and individual or simultaneous fork-positioning

Brakes

Oil-immersed 'wet disc' brakes are standard and contribute to increased productivity and reduced ownership costs

Electrics

The truck features a 24 Volt system with 70A alternator and CANbus connection in the operator cab, for engine, transmission, hydraulics and instruments cluster. The LCD display with diagnostics for engine, transmission and electrical systems quickly identifies service needs.

Lights

2 mast mounted work lights, 2 rear cab-mounted work lights, 2 front marker lights, LED direction indicators, stop, tail and reverse lights.

Serviceability

The DC/EC is easily accessible with unobstructed access to the engine compartment and key components, thanks to the sideways-tilting cab and the 'gull-wing' style hood doors. Conveniently located service check points, as well as centralised, PC accessible diagnostics and CANbus connections (for engine, transmission, hydraulics and instruments) help to reduce fault identification time.

Truck downtime can also be reduced thanks to clean electrical and hydraulic routings plus O-Ring Face Seals are used throughout to eliminate hydraulic leaks. Virtually maintenance free Oil-immersed 'wet disc' brakes are available on all models.

Longer service intervals increase uptime and reduce servicing costs - Load Sensing Hydraulics oil change interval is extended up to 6,000 hours from 2,000 hours.

All models' transmission oil change interval is extended to 2,000 hours from 1,000 hours.

Stage III B engine models additional features:

Auto Rev-Up: During lifting and tilting, the engine speed is automatically increased in relation to the joystick/lever position. This feature is

DC/EC Series

Models: GDP80DC, 90DC, 100DC, 100DCS, 120DC, GDP130EC, 140EC, 160EC

active when the transmission is in neutral and inching mode.

Drive Over Lift (DOL): Priority is given to driving and fitting at the same time. The hydraulic performance is reduced while driving. Hydraulic performance is automatically increased when engine speed (engine torque) increases. This feature ensures smooth truck operation under all conditions and assists in reducing operator fatigue.

High performance Mode (HiP):

Selects the engine power mode. In the HiP mode the maximum power and torque is available for hydraulic and drive functions..

Economy Mode (ECO-eLo): With a key switch the ECO-eLo engine power mode is enabled. Throttle reaction is less aggressive which saves the fuel. The maximum RPM is reduced to 2000RPM, the duty cycle time is slightly impacted in this mode.

Alternate idle mode: The engine RPM is automatically reduced to stand-by mode if no functions are used for 30 seconds. Stage IIIB engine normal idle is 900RPM (QSB4.5), 850 (QSB6.7), in alternate idle mode 800RPM (QSB4.5), 750RPM (QSB6.7).

Optional Equipment

- Air conditioning
- High performance air conditioning
- Climate control air conditioning
- Enclosed cab
- High backrest on seat
- DeLuxe air suspension seat
- Trainer seat
- Reading light in the cab
- Sun shade: sliding screen under top window of cab
- Extra air re-circulation fan, inside the cab
- Converter: 24 Volt DC to 12 Volt DC, to use 12 V accessories, with a 'cigarette lighter' socket on the dash panel
- Storage box, lockable in the cab, behind the seat, for storing equipment, tools, etc. Internal 58cm wide x 17cm deep x 17-25cm high.
Note: Not available with Trainer seat

- Engine block heater, for cold climates
- Electric-powered tilting cab for more convenient service access
- Lifting eyes (2 x on mast and 2 x on rear counterweight)
- Radial pneumatic tyres
- Solid (pneumatic shaped) tyres
- Foot Directional Control pedal
- Joystick hydraulic control
- Hydraulic oil high temperature warning and protection system
- 24/12 volt DC-DC converter
- Various light kits
- Application specific masts (2-Stage Limited Free Lift, 2-Stage Full Free Lift, 3-Stage Full Free Lift), carriages and forks Hydraulic accumulator
- Travel speed limiter
- Back-up alarm (self-adjustable to 5dB above ambient)
- Special RAL colours
- Various attachments: Coil ram, paper roll clamp, etc.
- Raised cab position 500mm
- Mast tilt kits: (standard is 15° forward and 12° back) 20.5° forward and 7° back, or 5° forward and 12° back, or 15° forward and 10° back

- Protection rings on the rear steering wheels (to protect the wheel studs and nuts)
- Empty seat shutdown feature with variable time (3-15 minutes) delay. Saves fuel.
- Battery Master Switch, to disconnect the battery. Accessible from outside, mounted on the left-hand battery compartment.
